Rainbow® e²™

Meets Carpet Industry Standards

The Carpet and Rug Institute (CRI) has initiated a Vacuum Cleaner Indoor Air Quality Testing Program that identifies vacuum cleaners that have been evaluated by an independent testing laboratory and have met the Carpet Industry Standard for all three elements: soil removal, dust containment and carpet appearance.

The CRI IAQ Label identifies vacuum cleaners that have demonstrated features that protect the carpet investment while minimizing adverse impacts on indoor quality.

The Rainbow® e² has met these standards.

**VACUUM CLEANER
INDOOR AIR QUALITY
TESTING PROGRAM**

ID #: 75932

**Meets Carpet
Industry Standards for**

- ✓ Soil Removal
- ✓ Dust Containment
- ✓ Appearance Retention

The Rainbow® is now certified as
asthma & allergy friendly™
by the Asthma and Allergy Foundation of America (AAFA).

Certified by Asthma and
Allergy Foundation of
America (AAFA)

This certification is only awarded to vacuum cleaners that have been scientifically proven to remove allergen from carpeting, while retaining allergen within the vacuum cleaner.

Testing according to **Allergy Standards Limited (ASL)** Protocols scientifically proves that the certified vacuum adheres to these principles:

- It removes a significant amount of allergens from carpeting.
- Allergen that is removed is retained within the vacuum cleaner.
- The removal of allergen is a result of the action of the vacuum cleaner and the allergen is not simply re-distributed.
- The vacuum cleaner does not experience a reduction in allergen pick-up in the presence of a partially filled receptacle.
- The operator of the vacuum is not excessively exposed to allergen when emptying the receptacle.

The asthma & allergy friendly™ Certification mark clearly demonstrates a business to consumer point of view that Rexair's Rainbow Cleaning System has the capability to positively contribute towards a healthy environment.

About AAFA

The reputation within the United States of the AAFA as the leading not for profit organization representing the interests of asthma and allergy sufferers is unsurpassed. AAFA is the most trusted source for unbiased information and the first place that politicians, patients, parents, consumers and media go to when they need information about asthma and allergies.

About ASL

Allergy Standards Limited (Dublin, Ireland) is a physician-led organization with a strong scientific team. ASL is involved in several areas where indoor environmental quality is a relevant business issue. The ASL laboratory has a track record in hospital infection control, allergen/ mold monitoring and air particulate monitoring in homes and commercial buildings.

Vacuum Cleaners (Water Based Filtration)

Vacuum Cleaners with water based dust collection systems that are certified **asthma & allergy friendly™** are tested to the ASP-03:01/103 Addendum 2 Certification Standard. The Certification Standard utilizes an algorithm of proprietary and recognized scientific techniques to assess Vacuum Cleaners for their ability to reduce allergenic and irritant materials, both when new and after extended use. The Standard also takes account of the possibility that any technology that uses water as a functioning agent, or produces water as a by-product, creates the potential for increased relative humidity, and therefore may enhance conditions for mold growth and house dust mite replication. Submitted Vacuum Cleaner models that pass certification testing are granted a certificate stating that the particular Vacuum Cleaner meets the requirements for the **asthma & allergy friendly™** ASP-03:01/103 Addendum 2 Certification Standard.

The Principles for Certification of Vacuum Cleaners incorporating a water based dust collection system include:

- (a) Evaluation of capability to remove allergen-containing test dust from carpets
- (b) Evaluation of airborne allergen levels during vacuuming
- (c) Evaluation of the integrity of the air filtration system
- (d) Assessment of exposure to allergens during receptacle emptying
- (e) Evaluation of the impact of a water based dust collection system on relative humidity of the air and carpet
- (f) Provision of a care code that emphasizes the importance of mold growth prevention in the collection system

All certified **asthma & allergy friendly™** Vacuum Cleaners with water based dust collection system carry a unique certification code.

Rainbow Cleaning System

Clean Air Delivery Rate (CADR)

Certified by Association of Home Appliance Manufacturers (AHAM)

Clean Air Delivery Rate

Rainbow
e SERIES' e'

C e r t i f i e d R a t i n g

From air cleaner to air cleaner, compare the Clean Air Delivery Rate (CADR) numbers. First, look at suggested room size. Then refer to the tobacco smoke, dust and pollen CADR numbers.

The Rainbow® e' is suggested for use in a single closed room up to 90 square feet.

Room size ratings conform to the AHAM Certification Program criteria of 80% smoke reduction. Higher Clean Air Delivery Rates provide improved performance in all room sizes. Portable air cleaners will be much more effective in rooms where all doors and windows are closed.

CADR Ratings

Tobacco Smoke: 55

Dust: 61

Pollen: 67

The higher the numbers, the faster the unit filters the air.

These values represent performance that can be expected within the first 72 hours of operation. Subsequent performance may vary with use.
