The world's most advanced cleaning system.

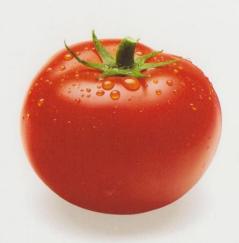

FACT:

Humans need three essential things in order to live...

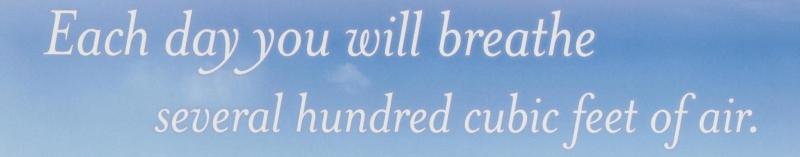

Clean food.

Clean water.

Clean, fresh air.

Clean, pure air is just as important as clean food or clean water.

INSIDE YOUR HOME MAY BE MORE HAZARDOUS TO YOUR HEALTH THAN THE AIR OUTSIDE.

"Indoor levels of air pollutants can be 2-5 times higher, and occasionally 100 times higher, than outdoor levels."

 EPA Indoor Environments Division, Indoor Air Quality Tools for Schools: Actions to Improve IAQ (September 1999) "Chronic, ongoing exposure to dust mites at home can dramatically impact the health of people with asthma and those who are allergic or particularly sensitive to mites."

 California Air Resources Board (CARB). 2005. Report to the California Legislature: Indoor Air Pollution in California. Sacramento, CA: California Environmental Protection Agency.

Do you or members of your household occasionally suffer from:

- · Headaches?
- · Irritated eyes?
- Coughing?
- · Sore throat?
- · Dizziness?
- · Nausea?
- Nasal discharge?

POLLUTED AIR

MAY BE RESPONSIBLE FOR THESE SYMPTOMS.

There is very little you can do about the polluted air outside...
...but we may be able to help you indoors!

INCREASING STUDIES LINK HEALTH RISKS TO

DUST MITES AND INDOOR AIR POLLUTION

ALLERGIES: NOTHING TO SNEEZE

By Leon Jarof

While pollen is the No. 1 trouble-maker for sufferers, hundreds of other substances comproved the immune system into an irrating response. Among the more formidable and difficult to avoid are the droppings of the dust mite, a microscopic insect that thrives by the millions wherever dust collects in a house. Living on sloughed-off flecks of human skin (dander) and other unappetizing protein, it leaves droppings that are about the size of pollen grains - and just as easy to inhale. Mite dung, unfortunately, is an allergen that produces the familiar sneezing, coughing, itching symptoms in half of all people who have allergies.

CLEARING THE AIR ON HOME POLLUTANTS

By Tyrone M. Reyes, M.D.

Smelling noxious fumes on a busy highway or near an airport, you may wish you were safe at home breathing clean air. Actually, the air at home may be as much in need of a good cleanup as the air

"A growing body of scientific evidence shows that the air you breathe at home, whether you live in the city, the country, or the suburb, is often more

ar a factory. A growing body of e shows that the air you breathe you live in the city, the country, often more polluted than the air ople spend more time indoors re time at home than anywhere ts cite "the rule of 1,000." This ants released indoors are 1,000 contant in causing human exposure

than the same pollutants outdoors.

WHAT MAY BE IN HOUSEHOLD **DUST PARTICLES?**

- Pet dander
- Mold spores
- Pollen
- Dust mites
- Fleas, ticks, moths, ants & other insects
- · Cigarette ashes
- Fireplace soot

- Paint
- Plastic
- Rubber
- Nylon
- · Wood
- Fiberglass

Many people are more allergic to dust mites and mold spores than other components.

DO YOU KNOW YOUR HOME'S DIRTIEST PLACE?

- Humans shed an average of 40 pounds (18.8 kilograms) of skin in their lifetime.
- Dust mites love a warm, moist bed full of dead skin.
- Depending on its age, your mattress may contain between 100,000 and 10,000,000 dust mites.
- Your mattress and pillow weigh 30% more after two years because of this.

Let me show you how the Rainbow[®] can clean your mattress...

May I ask normally how do you clean up your house?

HOW DO YOU FEEL WHEN YOU ARE EATING, THERE IS SOMEONE SWEEPING THE FLOOR?

Sweeping

While sweeping floor, bigger dust particles are collected, but smaller dust particles will fly up in air, part of it you will breathe and after a few hours the other part will settle back onto furniture, TV, Artefacts, and the floor. That is why the sweeping floor becomes a never ending process.

Floor & Wall Brush

- For clean and attractive looking hard surface floors.
- Consistent use will help prevent scratches caused by floor debris.
- · Works great on walls.
- · Self-pivoting.

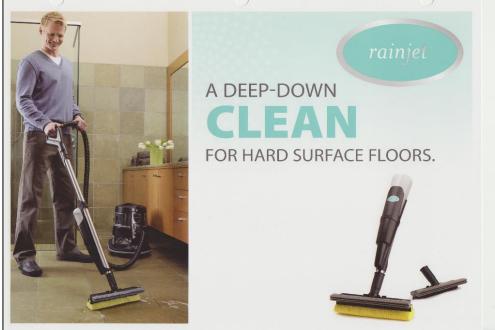

Mopping

While mopping of a floor with a mop and bucket full of water with cleaning agent the dirt particles are put back into the water, and then spread around the floor, thus defeating the very purpose of moppiing.

RAINBOW is the Solution

Aerodynamics: Air in Motion

Moving air lifts dust, dirt, and debris and whisks it into the Rainbow's water basin.

Hydrodynamics: Water in Motion

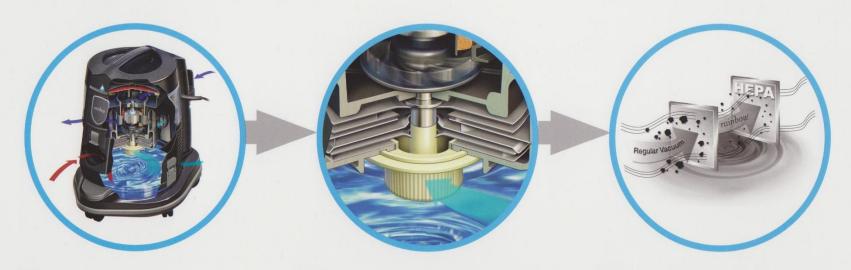

Dirt and dust are trapped in a swirling water bath. Fresh, waterwashed air is returned to your home.

Together, they give you a cleaner, healthier home.

the power of water® advantage...

The world's most advanced filtration system maintains constant airflow unlike other vacuums.

Water Bath

Disposable, extremely highcapacity (when compared to bag systems) captures over 99% of household dirt*. **2** Mechanical Separator

A dynamic filter that is extremely effective at increasing exposure of dirt to the water.

3 HEPA Neutralizer

99.997% (by weight) efficient at capturing any particles .3 microns or greater in size that might not be captured by the primary water filtration system.

^{*} By weight of typical household dirt and debris.

Based on the principle that
Wet Dust Can't Fly,
the Rainbow uses
The Power of Water
to effectively remove dirt
and airborne particles
from your home.

Together, they give you a cleaner, healthier home.

Traditional Cleaning

Sweeping a floor makes smaller dust particles fly and settle on furniture, artefacts, curtains etc.

Mopping a floor with a bucket full of water with a cleaning agent makes dirt particles spread around the floor, and then puts them back into water.

Manual cleaning is dependent on individual's efficiency at the time of cleaning.

Dust pumped back into the air requiring more frequent cleaning.

Air Purification does not happen while cleaning a home conventionally.

Rainbow

Unique water filtration traps dust permanently so it can't return to your home.

Dirt and dust are permanently removed from your floor as the dirty water is disposed and never reused.

Cleaning efficiency is always at its peak as it is not dependent on an individual.

Furniture, upholstery, curtains etc. last longer when there is no dust pumped back on them.

Rainbow cleans and purifies air at the time of cleaning.

Recommended Home Maintenance Solutions

Location	Frequency	Accessory to be used
Bed Mattresses	Twice a month	Clean with main surface with Rainbow Power Nozzle and sides with RainbowMate.
Sofa Sets, Curtains, Chairs, and Other Furniture	Once a week	Clean with Upholstery Tool, Crevise Tool, and RainbowMate.
Lamp shades, Artefacts, and other wall mounted items.	Once a week	Clean with Dusting Brush.
Carpets / Rugs etc.	Twice a month	Clean with Power Nozzle and remove spots with MiniJet.
Pillows and Cushions, Soft Toys etc.	Once a month	Refresh and Clean with Aerofresh Bag.
Hard Floor Surface	Daily	Clean with Floor and Wall Brush, and RainJet. Use Supermop if needed.
Walls, Ceilings, Pelmets etc.	Once a month	Clean Floor and Wall Brush and Dusting Brush.

Rainbow has been in the market since 1936, has 80 years of history, and is sold in more than 100 Countries worldwide

The Rainbow* is now certified as

asthma & allergy friendly™

by the Asthma and Allergy Foundation of America (AAFA).

This certification is only awarded to vacuum cleaners that have been scientifically proven to remove allergen from carpeting, while retaining allergen within the vacuum cleaner.

Testing according to Allergy Standards Limited (ASL) Protocols scientifically proves that the certified vacuum adheres to these principles:

- · It removes a significant amount of allergens from carpeting.
- · Allergen that is removed is retained within the vacuum cleaner.
- The removal of allergen is a result of the action of the vacuum cleaner and the allergen is not simply re-distributed.
- The vacuum cleaner does not experience a reduction in allergen pick-up in the presence of a partially filled receptacle.
- The operator of the vacuum is not excessively exposed to allergen when emptying the receptacle.

The asthma & allergy friendly "Certification mark clearly demonstrates a business to consumer point of view that Rexair's Rainbow Cleaning System has the capability to positively contribute towards a healthy environment.

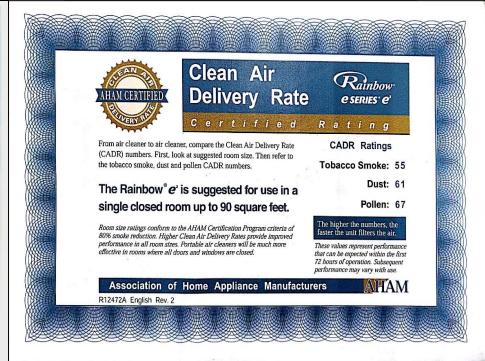

About AAFA

The reputation within the United States of the AAFA as the leading not for profit organization representing the interests of asthma and allergy sufferers is unsurpassed. AAFA is the most trusted source for unbiased information and the first place that politicians, patients, parents, consumers and media go to when they need information about asthma and allergies.

About ASL

Allergy Standards Limited (Dublin, Ireland) is a physician-led organization with a strong scientific team. ASL is involved in a several areas where indoor environmental quality is a relevant business issue. The ASL laboratory has a track record in hospital infection control, allergen/mold monitoring and air particulate monitoring in homes and commercial buildings.
